Gain Access to Insightful, Mission Critical Data in Microsoft Business Central:

Getting information from Microsoft Business Central can be greatly enhanced with a top industry-ranked information analytics solution called **Microsoft Power BI**.

At **iCepts Technology Group, Inc.** we have leveraged Power BI reporting capabilities in developing, visual dashboards for Microsoft Dynamics 365 Business Central to get information faster and easier to view that can be part of your user interface.

iCepts Power BI Reporting Pack for Microsoft Business Central include:

Aged Accounts Receivables: Get a detailed, categorized report across all of your customers to display, 30, 60, 90+ data ranges for a clear view of all the outstanding invoices and see an in-depth displays of monies owed in an instant.

Aged Accounts Payables: Similar to the previous report, you can view all of the payables in a defined, or combined category, apply filters such as customer, days, amount, age bucket, and also drill into the invoices to support the data.

Top Inventory: A unique report to display the value of your inventory, where is it, how much you have and drill down to trends and projections.

Top Customers: Quickly view your best customers, YTD, and compare to the previous year, revenue, margins, sold items and more custom filters. Find out what your most profitable items are in an easy-to-view dashboard.

Top Selling Items: Analyze performance of how items are selling and what profit margins are associated with these items, margins and by customer.

Top Vendors: Look at the vendors your purchase form and cost associated with each to compare costs with other vendors and amount spent by specified time frame.

Price Increase Forecast: This report gives you predicted profitability forecast scenarios by increasing prices that you control by designated increments.

iCepts Telemetry Suite: A useful diagnostic tool that uses the power of Microsoft's telemetry analytics to monitor and troubleshoot performance.
